EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael Fogarty on 8/29/06.

The application has been amended as follows: Claims 3-6 and 21-44 have been canceled as they are directed to nonelected inventions.

Response to Arguments

Applicant's arguments, see appeal brief, filed 6/20/06, with respect to the rejection of claims 10-18 and 45-52 have been fully considered and are persuasive. The rejection of claims 10-18 and 45-52 has been withdrawn.

Allowable Subject Matter

Claims 10-20 and 45-52 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claims 10-20 and 45-52, there is no prior art of record that teaches solely or in combination a LC cell comprising a transparent top plate a substrate

including an active area, the substrate and the top plate collectively defining a cavity; **a reservoir in at least one of the substrate and the top plate and connected to the cavity**; liquid crystal material within the cavity and the reservoir; and an **electrode located in the reservoir** to attract ionic contaminants.

Fujioka as previously cited discloses a similar system that uses electrodes to attract ionic contaminants to an exterior region of the LC area however omits formation of a reservoir and placement of electrodes within the reservoir. Hatano as previously cited discloses Field Emission display with electrodes in a reservoir to attract ionic contaminants however this is not analogous art as the device operates in a fundamentally different from LCD displays. Fujioka's display operates similarly to a cathode ray tube where the beam trajectory, is negatively affected by ions found in the gases of the display. In the current invention the presence of ionic contaminants causes a breakdown of LC itself, therefore, the combination is unfeasible due to fundamental differences between the technologies.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
